

Cambridge Investment Research

Forming opinions on technology, advanced manufacturing, innovation and investment – worldwide, CIR has a record of excellent work for private sector companies.

CIR experts and analysts work smarter and more flexibly than large firms: they collaborate or work independently: this forward-looking approach delivers insight and foresight to clients.

Technology consultancy and investment research

CIR provides technology assistance and financial analysis in tech manufacturing & engineering (e.g. deposition or printing, materials, nanotech, energy), electronics and semiconductors, healthcare and biotechnology and information and communications.

CIR experts and analysts have powerful software tools for analysis such as smart web and database scanning for sentiment indices and marketing analysis through financial calculators, M&A & product – market entry and structured tools.

Market research

CIR also delivers your market research from a core and partner team in Cambridge, UK, and international associates. This way, CIR can set prices to fit your budget for solid market data and rational choices. CIR's flexible working keeps quality and dependability high.

Events

CIR designs and manages some of the smartest, new style and exciting events in the world.

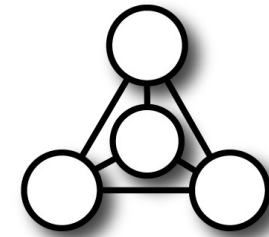

Driving CIR

Founded in 2001 by Dr Justin Hayward, 36, Professor Stephen Hawking's PhD physics student from 1991-5 in Cambridge, and previously a securities analyst at Deutsche Bank in London, CIR is an independent force in investment and innovation knowledge transfer.
